Subject: *Letter of Recommendation for Mr. Aditya Mulik - From Professor Daniel Peters, Northeastern University (College of Engineering)*

Dear Sir or Madam,

I am writing this letter in my capacity as a Professor in the College of Engineering at Northeastern University to provide my highest recommendation for Mr. Aditya Mulik, who served as my Teaching Assistant for three consecutive semesters in the graduate-level courses Object-Oriented Design and Design Patterns, both based on Java and advanced software engineering principles.

With over 37 years of academic and industry experience in software design, systems engineering and teaching advanced programming concepts, I have mentored a wide range of exceptional students. Among them, Mr. Mulik stands out as one of the most technically proficient, innovative, and dedicated individuals I have had the privilege of supervising. From the very beginning of his academic journey in Fall 2021, Aditya demonstrated a profound grasp of Object-Oriented Design, Design Patterns and enterprise-grade software architecture.

In addition to fulfilling his teaching assistant responsibilities with precision and professionalism, Mr. Mulik made a significant contribution by enhancing the efficiency and technical sophistication of our course infrastructure. He collaborated closely with me to introduce a GitHub-based version control and automated testing framework, enabling students to submit assignments through a modern, industry-aligned workflow. This system provided real-time feedback, streamlined grading, and improved scalability, greatly enriching both the teaching and learning experience. The framework continues to serve as an integral part of our course structure and is available in the reference repository linked below.

<https://github.com/CSYE6200-Object-Oriented-Design/Object-Oriented-Design-Template-Repository>

Mr. Mulik's impact extended far beyond automation. His ability to communicate complex programming concepts with clarity made him an invaluable mentor to students. He regularly assisted them in understanding intricate Java design patterns such as Factory, Singleton, and

Observer, as well as in applying software architecture best practices to real-world assignments. His approach combined technical rigor with approachability, earning him strong respect from both students and faculty alike.

Aditya's professional maturity and innovation are exceptional. He consistently demonstrated a blend of academic excellence, practical engineering expertise and leadership that is rarely observed at the graduate level. His initiative in improving instructional infrastructure and his commitment to academic integrity underscore his potential for continued contributions to the field of software engineering.

In conclusion, I unequivocally recommend Mr. Aditya Mulik as an individual of outstanding ability and professional distinction. His technical acumen, leadership in engineering education, and innovative mindset have left a lasting mark on our program. I am confident he will continue to make significant contributions to the advancement of technology and software systems on a broader scale.

Please feel free to contact me should you require any further information regarding Mr. Mulik's qualifications or his work under my supervision.
